

1. First, computer sends the request to your home router, using its local hardware address.
: Data Link Layer
2. The request is wrapped in a "package" (an IP packet) addressed to the web server's public IP address (188.184.67.127), which is its address on the internet. : Network Layer
3. Inside that packet is a TCP (Layer 4) segment destined for Port 80, indicating it's a web request. : Transport layer
4. The actual message is just a simple "GET" command, asking the server at info.cern.ch to send back its main webpage. : Application layer
